SUMMARY

*A skilled professional with 17+ years of IT experience
Strong skills in integrating security tools in CI/CD build pipelines including Project Setup, Build and Release process setup, Build Automation, Continuous Integration, AWS, DevSecOps and cloud Security. Seasoned interpersonal skills, strong work ethics, and ability to stay organised within fast - paced organisations.*

TECHNICAL SKILLS

Infrastructure as Code (IaC): Terraform, GoCD, AWS CloudFormation

IT Delivery Methods: Agile, Scaled Agile, Scrum, SAFe

Scripting Languages: Shell, Python, JavaScript, TypeScript, Go

Security Scanning Tools: Snyk, Fortify on Demand

Version Control & CI/CD Tools: Git, GitHub Actions, Bitbucket, AWS CodeCommit

Configuration Management & Automation: Chef, Ansible

Containers & Orchestration: Kubernetes, Docker

Cloud Computing Services: AWS, Azure

Databases: MySQL, SQL Server, PostgreSQL, MondoDB

Project Management Tools: Jira, Confluence

Operating Systems: Linux, macOS, Microsoft Windows

API Tools: Postman, AWS API Gateway

PROFESSIONAL EXPERIENCE

BMW Group (Independent Contractor)

July 2024 - Current

Senior Cloud and Ansible Operations Engineer

Deploy, manage, and operate workloads on AWS and Azure, as well as implement security controls and compliance requirements

Create, manage and operate IaC with Terraform

Perform operating system and Ansible Automation Platform lifecycle management

Interact with Enterprise GitHub for version control and Git branching strategy

Track and update Jira user stories to ensure due dates are met

Discovery (Vitality Global)

Dec 2023 – June 2024

Senior DevSecOps Engineer

Responsibilities:

I drove the automation of security processes and tools, enabling continuous integration, continuous delivery, and continuous monitoring (CI/CD/CM). I also establish governance and continuous improvement processes aligned with organisational goals and industry best

practices.

Working closely with developers, IT operations, and security governance teams, I ensure the

seamless integration of security into all aspects of the development pipeline to enhance the

security posture and minimize vulnerabilities.

I am responsible for developing and enforcing security policies and guidelines for application

and infrastructure development, based on industry best practices

Ensure cloud security best practices, configuration, and management of cloud-based deployments, mentoring interns and Developers on best security practices

Currently implementing the AWS Security Maturity Model [AWS Security Maturity Model](#)

Audits and Assessments

I conduct regular security audits, vulnerability assessments, and penetration tests to identify

and remediate potential threats, ensuring the ongoing security of our systems.

Developing and implementing metrics, reporting, and monitoring processes is a key aspect of

my role. I utilize tools like VMWare SecureState, AWS CloudWatch, and Sonatype to track metrics such as vulnerability remediation times, security incidents, and code review coverage.

PROFESSIONAL EXPERIENCE;

Capitec Bank

July 2022 – Nov 2023

Cloud Security Engineer

Responsibilities:

- Responsible for application Build & Release process which includes Code Compilation, Packaging, Security Scanning and code quality scanning, Deployment Methodology and Application Configurations.
- Working with Sentinel and OPAs to ensure Code is Secure before its deployed to the cloud environment
- Extensively worked on GitHub Actions for continuous integration and for End-to-End automation for all build and deployments.
- Wrote cloud formation templates (CFT s) to automate the services that are used for the application deployment and Security Enhancements
- Worked closely with software developers and DevOps to debug software and system problems.
- Develop and implement automated security solutions for AWS environments.
- Implement security best practices and guidelines across the organization.
- Execute security incident response plans and monitor security events and incidents, providing valuable recommendations for improvement from Guardduty, EKS Protection and Malware Protection
- Developed Finops Solutions for Cost saving initiatives
- Created Auto remediation for Securityhub findings in AWS for PCI,CIS and NIST finding Remediations
- Created Quicksight Dashboard to show costsaving reports and Security findings reports
- Integrated security testing into the pipeline by setting up automated scans, creating alerts for security findings, identifying false Positives and blocking deployments with security vulnerabilities, using tools like Snyk and Sonacloud

Absa Bank

Jan 2016 – June 2022

Cloud Security and Devops Engineer

Responsibilities:

- Worked across teams in different roles within the bank first as a developer and deploying web application for provisioning cloud resources and driven by a passion for cloud technologies and security, I transitioned internally to join the Cloud team from Cloud support to Cloud Developer and later specialized in Cloud Security
- Experience in Amazon Cloud Services (AWS) creating features like EC2, IAM, VPC, EBS, AMI, APIs, Route 53, snapshots, Autoscaling, Cloud watch, CloudTrail,

SecurityHub, CloudFront, SQS, SNS, RDS, Cloud Watch, S3, API Gateways, Autoscaling, ALB, NLB, Lambda, Security groups.

Create & Utilize Cloud Watch to monitor resources such as EC2, CPU memory, Amazon RDS DB services, Dynamo tables, EBS volumes, Lambda Functions. Encrypting the EBS volumes to make sure the data in rest is secured and protected

Managing and configure Security within Kubernetes, Role-based access control, pod security policies, network policies and Container Image scanning

Develop chef Cookbooks and recipes to automate build/deployment process and do an overall process improvement to any manual process

Developed automated solutions for auto-remediating security best practices that failed audits within the Cloud infrastructure.

Created Roles and SCPs using Terraform and orchestrated them through the GoCD pipeline to enable AWS service execution in different accounts. Implemented robust security measures to safeguard the cloud environments, utilizing automation techniques.

Front End Web development with Angular, typescript and Python for helping teams Provision resource in the Cloud automatically
Ensure we provide safe code practices by identifying and remediating security vulnerabilities in open-source libraries and containers, performing web application security scans and vulnerability assessments, code quality analysis and continuous integration

Internal Project

During my Cloud Support Role and In response to the significant volume of cloud support tickets, I took the proactive step of creating a custom chatbot within the Azure environment. This chatbot was integrated into Microsoft Teams to address and resolve the day-to-day challenges faced by our teams as most were using Microsoft teams

This chatbot was designed not only to streamline issue resolution but also to provide quick access to solutions stored in our extensive knowledge base. By leveraging Azure's QnA Maker and chatbot development tools, I ensured that the chatbot could intelligently respond to queries and provide accurate solutions. As a result, we witnessed a notable reduction in the number of support tickets generated, ultimately leading to more efficient and productive operations."

SQL Database Administrator and SQL Developer

Demonstrated expertise in day-to-day maintenance and optimization of SQL Server databases.

Proficiently performed SQL installations, configurations, and necessary updates.
Monitored databases using SCOM and CA UIM, ensuring optimal performance.
Employed C#, Terraform, Chef to automate infrastructure tasks.
Conducted comprehensive audits to ensure adherence to best practices.

Liberty Life Insurance

Sep 2008 - Dec 2009

Installed, configured, implemented, maintained, and optimized SQL Server databases.

Provided exceptional client support for database access, backups, and troubleshooting.

Offered on-call and standby support for production database issues.

Achieved significant automation of database administration tasks and processes.

National Treasury

January 2005 -August 2008

Intern working as a SQLDBA for the National Treasury system, SafetyNet that manages Payments for Banks

- Run and optimise SQL Queries
- Managing of Database backups and Restores

QUALIFICATIONS

Undergrad Computer System Engineering - Tshwane University of Technology (2004)

- MCST - Querying SQL Server - Microsoft (2014)
- Amazon Certified Solutions Architect – Associate - Amazon Web Services (2020)
- Amazon Certified Developer – Associate - Amazon Web Services (2020)
- *Amazon Certified Security Specialty - Amazon Web Services (2021)*
- Amazon Certified Machine Learning Specialty - Amazon Web Services (2021)
- Cybersecurity: Managing Risk in the Information Age - Harvard (2021)
- Terraform Associate - HashiCorp (2022)
- Amazon Certified DevOps Engineer- Professional (2023)
- *ISC2 Certified in CyberSecurity(CC) 2023*
- *Microsoft - AZ-900 Azure Fundamentals -2024*
